CSC8101: Penetration testing

Assignment 3

Created by Deep Shah

Student ID: U1137064

Date: May 31, 2022

Reviews

Student name and ID	Pentest report	Video presentation
David Clacy U1127773	Marks: 19 Comments: David has mentioned all the objectives of penetration testing along with the information about different tools which is the main purpose of the assignment. The two Marks I have cut are because he explains everything, but it should be inside the report because when it is submitted to officials, they only accept the report with everything in it.	Marks: 8 Comments: the presentation is really good and clear it only exceeds a little bit more than the time limit.
Ah Fong Chan W0004062	Marks: 18 Comments: presentation is good with all the requirements. As one of the motives behind, the report is that other people can also follow the steps and can do the same test that was performed; I find it difficult to follow.	Mark: 8 Comments: nice live presentation of every test and explanation about vulnerability.

Dennis Liu U1137133	Marks: 15 Comments: choice of tools is good but could have explained more about tools like what they do and how they were used in this test.	Marks:5 Comments: live presentation of testing is a good idea, but I think it would be better if Dennis explain the process. The video has no sound which makes it hard to understand the process.
Pathirage Sajith Harsha U1141999	Marks:13 Comments: A nice and detailed presentation of the report but the target was not defined properly and also missing the reference of the vulnerability such as CVE numbers and also need to mention every tool clearly used for the test for example he used john the ripper for password attack but didn't mention in the scope.	Marks:5 Comments: good explanation of the whole report but exceed too much than the limit.
Harmanpreet Kaur U1142836	Marks: 14 Comments: nice and unique way of presenting the testing process using flags. But could have used more information about the tools to understand them better with the screenshots of live testing.	Marks: 6 Comments: could have explained more about the report and the tools used along with the vulnerabilities found.
